A modem (portmanteau of modulator-demodulator) is a hardware device that converts data so that it can be transmitted from computer to computer over telephone wires. The goal is to produce a signal that can be transmitted easily and decoded to reproduce the original digital data. Modems can be used with any means of transmitting analog signals, from light-emitting diodes to radio.

Q: What's lamer than a crappy photo of Nebraska? A: Having to pay \$8,000 in copyright infringement penalties for it. This is a lesson we recently learned the hard way, and if you have (or contribute to) a blog you might want to read about our story so that you never, ever make the same mistake we did.
