DIFFERENTIAL GEOMETRY: A First Course in Curves and Surfaces

Most students taking a course in linear algebra will have completed courses in differential and integral calculus, and maybe also multivariate calculus, and will typically be second-year students in university. This level of mathematical maturity is expected, however there is little or no requirement to know calculus itself to use this book successfully.

Content: I think for a first course, it could be a little clearer. The book implies too much knowledge of certain

things, and the solutions are not even online for the third edition. It seems too varied in its goals.

4 A first course in algebraic topology We call C/K the quotient group of C by K . The first isomorphism theorem states that if $f: G \rightarrow H$ is a surjective homomorphism from a group G to a group H with kernel K then H is isomorphic to the quotient group G/K . If $g \in G$ then the subgroup generated by g is the subset of G consisting of all integral ...
