In addition, noise pollution control is included in the handbook series. This particular book Volume 9, Advanced Biological Treatment Processes, is a sister book to Volume 8 Biological Treatment Processes. Both books have been designed to serve as comprehensive biological treatment textbooks as well as wide-ranging reference books.

Advanced Biological Treatment Processes: Volume 9

Volume 9: Advanced Biological Treatment Processes in the Handbook of Environmental Engineering series provides critical insight into pollution-abatement engineering. This outstanding collection of methodologies is designed as a review of engineering systems currently being used, as well as their potential for use in pollution abatement.

ADVANCED WASTEWATER TREATMENT

Given the importance of removing nitrogen compounds from wastewater, the latest advances in this area, including new processes for nitrogen removal (e.g. Anammox), are also reviewed. Developments in molecular biology techniques over the last twenty years provide insights into the complex microbial diversity found in biological treatment systems.

Advanced Biological Processes for Wastewater Treatment

The ZENON ABMet® system is built around an advanced biological wastewater treatment process that uses naturally occurring non-toxic, non-pathogenic microbes in specially developed mixtures, which reduce and precipitate target compounds from solution, or convert target compounds into their insoluble chemical components.

CHAPTER 15 ADVANCED WASTEWATER TREATMENT

Sewage treatment is the process of removing contaminants from municipal wastewater, containing mainly household sewage plus some industrial wastewater. Physical, chemical, and biological processes are used to remove contaminants and produce treated wastewater (or treated effluent) that is safe enough for release into the environment.
