Ammonia Systems for SCR - Worldwide Pollution Control

Preface. Recent fatalities during releases at anhydrous ammonia loading stations illustrate the potential hazards associated with transfer operations if the transfer system is not adequately protected from hose severance or an inadvertent pull-away during transfer.

How much water is bad? This is a debatable question. Refrigerant grade anhydrous ammonia should be 99.95% pure (33 ppm or less). 0.2% water may protect against stress

By Le Chatelier's Principle:. increasing the pressure causes the equilibrium position to move to the right resulting in a higher yeild of ammonia since there are more gas molecules on the left hand side of the equation (4 in total) than there are on the right hand side of the equation (2).
