Modeling and Agroecosystem analysis Using in Integrated

Animal sexual behaviour takes many different forms, including within the same species. Common mating or reproductively motivated systems include monogamy, polygyny, polyandry, polygamy and promiscuity. Other sexual behaviour may be reproductively motivated (e.g. sex apparently due to duress or coercion and situational sexual behaviour) or non-reproductively motivated (e.g. interspecific ...

IntroductionS. oryzae is universally regarded as one of the most destructive primary pests of stored cereals such as barley, maize, rice and wheat....

Sitophilus oryzae (lesser grain weevil)

The telomerase reverse transcriptase has an essential role in telomere maintenance and in cancer biology. Progress during the last year has revealed the three-dimensional architecture of both human and ciliate telomerase at about 25 \tilde{A} ... resolution, obtained using single particle electron microscopy (EM). The structural analysis of the two holoenzyme complexes isolated from cells shows that ...

Exploring natural plant products as an option to find new chemical entities as anticancer agents is one of the fastest growing areas of research. Recently, in the last decade, essential oils (EOs) have been under study for their use in cancer therapy and the present review is an attempt to collect and document the available studies indicating EOs and their constituents as anticancer agents.

Essential Oils and Their Constituents as Anticancer Agents

À maturité, le systà me racinaire des graminées est fibreux et fasciculé, constitué exclusivement de nombreuses racines adventives qui forment un chevelu important. Ces racines adventives remplacent les racines séminales et les racines nodales primaires qui ont une durée de vie éphémà re.
