Newton's law of universal gravitation states that every particle attracts every other particle in the universe with a force which is directly proportional to the product of their masses and inversely proportional to the square of the distance between their centers. This is a general physical law derived from empirical observations by what Isaac Newton called inductive reasoning.

The NAR has two Safety Codes, one for model rockets and another for high-power rockets. The main differences are in the specified distances everyone must stand back from a launch, and in the extra rules for high power requiring user certification and compliance with FAA airspace rules.
