This document is the Hardware User's Manual for the Lumistar LS27B Dual Channel Multi-band RF Downconverter. This product represents Lumistar's 3rd generation of the LS27 Series of Dual

Dual channel Multi-Band RF Downconverter with AM and FM

Dual-channel, Multi-band Down-converter The MON4000 is a multi-band radio frequency (RF) front-end device (FED). It provides two independent channels of RF-to-bits conversion for up to six selectable RF bands. These bands are chosen at time of manufacture from any of the bands allocated to ...

Multi-Band RF Sampling Receiver Solution TI Designs Multi-Band RF Sampling Receiver Solution All trademarks are the property of their respective owners. ... The ADC32RF80 is a dual-channel telecom receiver. It includes a 14-bit, 3-GSPS ADC with built-in decimation. It has a 3-dB input bandwidth of 3 GHz and is usable up to 4 GHz.

Multi-Band RF Sampling Receiver Solution - TI.com

The RF sampling receiver captures signals directly in the radio frequency (RF) band. In a multi-band application the desired signals are not very wide band but they are spaced far apart within the spectrum. The reference design captures signals in different RF bands and digitally down-converts them to baseband.

In telecommunications, a multi-band device (including dual-band, tri-band, quad-band and penta-band devices) is a communication device (especially a mobile phone) that supports multiple radio frequency bands.

All devices which have more than one channel use multiple frequencies; a band however is a group of frequencies containing many channels.
