in the formulation of electromagnetic boundary value problems, it is a largely unexploited tool for field

computation. The development of algebraic topology since Maxwell provides a framework for linking data structures, algorithms, and computation to topological aspects of three-dimensional electromagnetic boundary value problems.

ered obvious" by considering Kirchho's laws and circuit theory in the light of Maxwell's electromagnetic theory. To this older electrical engineer, topology would be considered part of the engineer's art with little connection to computation beyond what Maxwell and Kirchho would have regarded as computation.
