Big O notation is useful when analyzing algorithms for efficiency. For example, the time (or the number of steps) it takes to complete a problem of size  $n$  might be found to be  $T(n) = 4n^2 + 2n + 2$ . As  $n$  grows large, the  $n^2$  term will come to dominate, so that all other terms can be neglected—for instance when  $n = 500$ , the term  $4n^2$  is 1000 times as large as the  $2n$  term.

The use of light-emitting electronic devices for reading, communication, and entertainment has greatly increased recently. We found that the use of these devices before bedtime prolongs the time it takes to fall asleep, delays the circadian clock, suppresses levels of the sleep-promoting hormone melatonin, reduces the amount and delays the timing of REM sleep, and reduces alertness the ...

Since the slowdown in surface warming over the last 15 years has been a popular topic recently, I thought I would show results for the lower tropospheric temperature (LT) compared to climate models calculated over the same atmospheric layers the satellites sense.
