

gene expression and regulation pdf

Gene expression is the process by which information from a gene is used in the synthesis of a functional gene product. These products are often proteins, but in non-protein coding genes such as transfer RNA (tRNA) or small nuclear RNA (snRNA) genes, the product is a functional RNA.

Mutations in DNA regions that control gene expression can alter the way genes are expressed. Lactase persistence is the trait that allows adults to continue to digest milk; it results from a mutation in an enhancer region of the lactase gene.
