

gravity a familiar force pdf

saying that the gravitational force is the same as that of a point mass in the centre of the shell with the same mass. Finally, integrate all infinitesimally thin spherical shell with mass of dM , and we can obtain the total gravity contribution of a solid ball to the object outside the ball

Shell theorem - Wikipedia

When an object's weight (its gravitational force) is expressed in "kilograms", this actually refers to the kilogram-force (kgf or kg-f), also known as the kilopond (kp), which is a non-SI unit of force. All objects on the Earth's surface are subject to a gravitational acceleration of approximately 9.8 m/s^2 . The General Conference on Weights and Measures fixed the value of standard gravity at ...
