To make interacting photons, the team shone a weak laser through a cloud of cold rubidium atoms. Rather than emerging from this cloud separately, the photons within the laser merged bound in groups of three.

Hydraulic engineering as a sub-discipline of civil engineering is concerned with the flow and conveyance of fluids, principally water and sewage. One feature of these systems is the extensive use of gravity as the motive force to cause the movement of the fluids. This area of civil engineering is intimately related to the design of bridges, dams, channels, canals, and levees, and to both ...

The general form of wavefunction for a system of particles, each with position r_i and z-component of spin s_z . Sums are over the discrete variable s_z , integrals over continuous positions r_i . For clarity and brevity, the coordinates are collected into tuples, the indices label the particles (which cannot be done physically, but is mathematically necessary).
