

non functional requirements for pdf

In systems engineering and requirements engineering, a non-functional requirement (NFR) is a requirement that specifies criteria that can be used to judge the operation of a system, rather than specific behaviors. They are contrasted with functional requirements that define specific behavior or functions. The plan for implementing functional requirements is detailed in the system design.

Non-functional testing is the testing of a software application or system for its non-functional requirements: the way a system operates, rather than specific behaviours of that system. This is contrast to functional testing, which tests against functional requirements that describe the functions of a system and its components. The names of many non-functional tests are often used ...

Non-Functional Requirements: Do User Stories Really Help?

A common challenge with writing user stories is how to handle a product's non-functional requirements. These are requirements that are not about specific functionality ("As a user of a word processor, I want to insert a table into my document."), but are rather about an attribute or characteristic of the system.
