Petroleum (/ p ɛˈt r oʊ ɪ ˈm /) is a naturally occurring, yellowish-black liquid found in geological formations beneath the Earth's surface. It is commonly refined into various types of fuels. Components of petroleum are separated using a technique called fractional distillation, i.e. separation of a liquid mixture into fractions differing in boiling point by means of distillation ...

Une plate-forme pétrolière est une construction marine fixe ou flottante qui sert à l'exploitation d'un gisement pétrolier.. Elle supporte principalement les dispositifs nécessaires pour la phase de forage et d'extraction du pétrole, ainsi que parfois des équipements destinés à assurer une présence humaine à bord.Certaines plates-formes permettent de transformer le pétrole, le gaz ...

### Plate-forme pétrolière - Wikipédia

Le pétrole est un liquide visqueux, inflammable, composé principalement de hydrocarbures. Il est issu de la décomposition de matière organique morte, accumulée au fond de la mer ou sous le sol, et transformée en pétrole par l'action de la chaleur et de la pression. Le pétrole est utilisé comme carburant pour les moteurs à combustion interne, comme matière première pour la production de produits pétroliers (plastiques, produits chimiques, etc.) et comme source d'énergie. Le pétrole est une ressource non renouvelable et son utilisation contribue à l'effet de serre et à la pollution de l'environnement.

### Shale energy extraction activities in residential areas have the potential to adversely affect human health.

The oil and gas sector is the largest industrial source of volatile organic compounds, which are dangerous because they include hazardous air pollutants, such as the carcinogen benzene; and because they are precursors to ozone, which is also hazardous to health.

### The Human Health Implications of Oil and Natural Gas

Le gaz naturel liquéfié est principalement utilisé comme moyen de transporter du gaz naturel d'un pays producteur vers un pays consommateur.
