Real options valuation, also often termed real options analysis, (ROV or ROA) applies option valuation techniques to capital budgeting decisions. A real option itself, is the right "but not the obligation" to undertake certain business initiatives, such as deferring, abandoning, expanding, staging, or contracting a capital investment project. For example, the opportunity to invest in the ...

We start with the one factor case. We will define the concept of factor elsewhere, but for now we simply view this type of analysis as an extension of the  $t$  tests that are described in Two Sample  $t$ -Test with Equal Variances and Two Sample  $t$ -Test with Unequal Variances. We begin with an example which is an extension of Example 1 of Two Sample  $t$ -Test with Equal Variances.
