122357866 Transport Processes and Separation Process

ABSTRACT. This work presents an experimental study of purification of a biogas by removal of its hydrogen sulphide (H_2S) content. The H_2S was removed by means of chemical absorption in an iron-chelated solution catalyzed by Fe/EDTA, which converts H_2S into elemental sulphur (S). Preparation of the catalyst solution and the results of biogas component absorption in the catalyst solution ...

Chemical absorption of H₂S for biogas purification - SciELO

A chemical reactor is an enclosed volume in which a chemical reaction takes place. In chemical engineering, it is generally understood to be a process vessel used to carry out a chemical reaction, which is one of the classic unit operations in chemical process analysis. The design of a chemical reactor deals with multiple aspects of chemical engineering.

Chemical reactor - Wikipedia

The selection of a suitable thermodynamic model for the prediction of the enthalpy-H and the phase equilibrium-K is fundamental to process modelling.

P & I Design Ltd - CHEMCAD is a suite of chemical process

Leaching and recovery processes for zinc and copper from brass slag by sulfuric acid were carried out and iron and aluminum were also precipitated as hydroxides in addition to silica gel.

INTRODUCTION. New methods to generate energy have been investigated in the last decade due to concerns about the depletion of fuels. Hydrogen is a promising source of energy because this gas affords a clean and high heat of combustion.

Production of hydrogen in the reaction between aluminum

In physical and organic chemistry, the dispersity is a measure of the heterogeneity of sizes of molecules or particles in a mixture. A collection of objects is called uniform if the objects have the same size, shape, or mass. A sample of objects that have an inconsistent size, shape and mass distribution is called non-uniform. The objects can be in any form of chemical dispersion, such as ...

Dispersity - Wikipedia

A major challenge in gas sensing (e.g. breath analysis, indoor air quality monitoring, etc.) is the accurate detection of trace-level species in complex mixtures.
